PROFILE

Aspiring AI enthusiast with a strong foundation in Python and a growing interest in machine learning, deep learning, and natural language processing. Currently focused on building practical skills through online courses and hands-on projects. Passionate about applying artificial intelligence to solve real-world problems and continuously expanding my knowledge in the field.

EDUCATION :

SOFTWARE ENGINEERING

Sham-University 2021-2025

Full Stack Web & Mobile Development with Laravel and Flutter

Midad Educational Institution

PROJECTS

- **Mobile Price Prediction using K-Nearest Neighbors (KNN):**
Developed a machine learning model to predict smartphone price ranges based on features such as RAM, battery capacity, screen size, and more. Utilized the KNN algorithm with data preprocessing and visualization using `pandas` and `matplotlib`. The model was implemented using `scikit-learn`.
- **Heart Disease Prediction using Decision Tree and Random Forest:**
Built a predictive model to identify the likelihood of heart disease in patients using clinical data such as age, cholesterol, and blood pressure. Implemented and compared Decision Tree and Random Forest algorithms using `scikit-learn`, and visualized results with `matplotlib` and `seaborn`. Data manipulation and preparation were done with `pandas`.
- **8 Queens Puzzle Solver using DFS and BFS Algorithms:**
Implemented classical AI search algorithms (Depth-First Search and Breadth-First Search) to solve the 8 Queens puzzle on a chessboard. The project demonstrates algorithmic problem-solving by exploring valid queen placements where none threaten each other. The solution includes visualization of the search process and was implemented in Python using basic data structures.

SKILLS

Python (primary language for AI/ML), C++, Java, Kotlin, Dart, C#, PHP

AI & Machine Learning:

Hands-on experience with supervised learning algorithms (KNN, Decision Trees, Random Forest), search algorithms (DFS, BFS), and working knowledge of core ML libraries including NumPy, pandas, Matplotlib, Seaborn, and scikit-learn.

Problem Solving:

Strong analytical and algorithmic skills with active practice on platforms like **LeetCode**. Solid understanding of **Algorithms** and **Data Structures**.

Frameworks & Tools:

- **AI/Web Frameworks:** Django (Python), Laravel (PHP)
- **Mobile Development:** Flutter (Dart), Android Native (Java/Kotlin)
- **UI for AI apps:** JavaFX + CSS for desktop visualizations
- **Visualization & Data Exploration:** Matplotlib, Seaborn

Soft skills :

Communication skills

Working within a team

Withstand work pressure

Ability to work long hours

Fast learner with a strong ability to grasp and apply new concepts and technologies, especially in AI and emerging tech fields.

LANGUAGES :

Arabic : Native Language

English: Advanced
